

ABSTRACT OF THE DISCLOSURE

5 The imaging apparatus for a microscope, according
to the present invention, comprises an imaging section
which picks up an observation image of a sample formed
in a microscope body, an imaging apparatus body having
the imaging section, a display section which displays
10 image data corresponding to the observation image
picked up by the imaging section, and an operation
section which performs operation of the imaging
section, wherein the imaging apparatus body and the
display section are separate from each other.
